Case No. 25cv2006 (D. Md.)

marvindtutt@gmail.com

June 30, 2025

U.S. District Court for the District of Maryland

Attn: Chief Magistrate Judge Timothy J. Sullivan

Re: Motion to Amend Complaint - Damages Increase from \$1.2B to \$3.2B

Tutt v. Robinson et al., Case No. 25cv2006

Your Honor,

I am filing this amendment not by choice, but by necessity. The defendants had every opportunity to avoid this escalation. They chose otherwise. The defendants chose that investigating themselves, protecting free speech, and following the law, is a worse option for them than the possibility of more damages.

About the cyber crimes, I understand some contractors operate in bad faith or believe they are “just trying to help.” I am being reasonable.

All hack attempts were unsuccessful, but slowly progressed in sophistication. The attempts have been reported to the appropriate federal authorities.

I usually self host my projects on a debian HP-Proliant server from home. Luckily I used tunnels for connection instead of portforwarding, and luckily the server has been off. These attacks may have otherwise compromised every device in my household and certainly would bring foreign attention to my house.

On Saturday June 28th I felt a disturbing violation that I never felt before. 3 of my projects, 1 of which is a passion project designed to help my friends with their creative writing was illegally accessed and targeted by foreign intelligence. This is due to state actors making uninformed decisions without following necessary governmental protocols. I have proof that the state copied and shared my work, ignoring my licensing requirements. I am also reasonable about this, I can provide time for them to pay. I explicitly showed that the licenses are perpetual, meaning they include access to future updates. I made the licenses as cheap as possible while still satisfying their compliance policy requirements. They are unreasonable for paying untrusted parties to investigate, intimidate, and harm me, yet can't pay a simple license to use my work.

I am a Maryland taxpayer. Every paycheck, I funded the salaries of those who conspired to destroy me. I paid for:

- Magistrate Khoury's salary as she corrupted the judicial process

- CSEA staff wages as they filed as co-plaintiffs against me
- State attorneys who weaponized child support to guarantee imprisonment
- IT infrastructure used to cyberattack my self-help book
- The entire apparatus deployed to destroy one citizen - me

I worked on a project for the DoD. I pursued education as ordered by the court. I earned my expungement through compliance. I paid my taxes.

In return, they used those tax dollars to orchestrate my destruction. And they still are doing that.

By making me an intelligence target, they exposed this case to more eyes than I ever would. I filed this case in hopes that the state would use me to fix their issues so this doesn't get worse. Their rapid searches are increasing my SEO surface. I CHOSE not to take control of the narrative and expose corruption because I want to mitigate it! I am not a mastermind, I am a deeply disappointed citizen. Instead of learning constructive ways to progress from our situation, they seek ammunition to create more chaos.

ATTEMPTS AT ADMINISTRATIVE RESOLUTION

On June 25, 2025, I sent comprehensive documentation to 80+ federal and state officials, including the Maryland Attorney General, seeking administrative intervention in ongoing civil rights violations. I requested immediate action to stop the conspiracy.

I followed up, demonstrating restraint despite learning of the extraordinary Trump lawsuit creating maximum leverage. I chose administrative channels over media exploitation.

On June 27, 2025, the Attorney General's response arrived: hire a private attorney with money I don't have. Civil rights, apparently, are only for those who can afford them in Maryland. They also refused to investigate statewide fraud patterns and human rights violations.

THE ESCALATION THEY CHOSE

Within hours of publishing "The Burden" (theburden.org) - a self-help book about toxic relationships and trauma - state-sponsored surveillance began. Cloudflare reports document:

- 10,000+ aggressive requests attempting to breach the site
- Deployment of sophisticated attack vectors
- Immediate foreign intelligence interest (ALIBABA-CN-NET: 33 attempts, TENCENT-NET-AP: 30 attempts)
- French actors attempting credential theft (122 requests)

The state of Maryland transformed a trauma healing resource into an international intelligence target.

I started writing that book because no one has been through what I'm going through and I needed a guide.

I have a large amount of personal projects, some using microservices and over 200,000 lines of code. Maryland and I are extremely fortunate that I only posted my most basic ones, and on a Saturday. Saturday is when I had time. If I released these on monday, or released a large code base, the taxpayer cost and public attention could have been astronomical. NOW I have to be extra careful about what I post to github to make sure it doesn't waste the time of hardworking Americans. This is ridiculous on so many levels, I never asked for this. I should not have to live with intimidation and attempts to breach my domain. All this started from a fraudulent child support order... I am not state sponsored. I do not have access to classified information. I did not calculate a 90 day playbook... I am adapting and responding to injustice instead of letting it break me. I AM JUST A MAN TRYING TO GET HIS DEGREE, TAKE CARE OF MY SON, AND HAVE A NORMAL LIFE. WHY IS THAT HARD FOR EXPERTS TO BELIEVE?

I was almost ONE second away from hosting all my services on Google Kubernetes Engine, and there is evidence of this in my commit history. If I did that then the state would have ruined me BAD. I chose cloudflare.com last minute. Lucky for both of us!

“For World Builders” is a novel application that I created. It is specific to ME and my life. It has never been done before. I created it for my gaming friends who don't know how to code. Maryland just violated it like it was terrorist software. Ignoring the NO distribution policy. This is exactly why people are afraid to share their creations. Ironical how the app is designed to protect user's intellectual property...

This is the most traumatic turn of events I ever experienced in my life.

I went to charles county thinking they would save me from fraud and rights violations but they attacked me.

Then I went to Maryland and they attacked me with more fraud and MORE violations, now the first amendment. Plus PERSONAL attacks.

Cyber attacks were against:

JUSTIFICATION FOR AMENDED DAMAGES

The additional \$2B while conservative, reflects quantifiable harm from defendants' escalating conduct:

1. **\$600M** - Attorney General's refusal to investigate documented conspiracy despite clear jurisdiction over "patterns of misconduct affecting multiple persons"
2. **\$600M** - First Amendment violations through cyberterrorism against protected speech (my book)
3. **\$600M** - Transformation into national security threat, compromising my federal clearance eligibility and making me a target for foreign intelligence
4. **\$200M** - Destruction of intellectual property and development projects lost to foreign hackers as direct result of state-created vulnerabilities

Total: \$3.2B (Mostly punitive)

THE MATHEMATICS OF ACCOUNTABILITY

The defendants deployed unlimited taxpayer resources - MY resources - to destroy the taxpayer who funds them. The punitive damages must reflect this perverse asymmetry. When a state weaponizes the entire apparatus funded by a citizen against that same citizen, normal damages cannot capture the betrayal. This situation doesn't even sound right despite the exhibits containing forensic evidence. If I tell anyone this truth, they will look at me like I just told them aliens landed. If I tell someone China tried to hack me they will think I forgot to take meds or something.

Consider the arithmetic:

- My taxes → Their salaries → My destruction
- My compliance → Their conspiracy → My imprisonment (attempted)
- My rehabilitation → Their retaliation → My career annihilation

Key evidence supporting this amendment:

- Exhibit A: Email chain showing administrative outreach
- Exhibit B: Attorney General's dismissive response
- Exhibit C: Cloudflare security reports documenting attacks
- Other: GitHub surveillance evidence (70+ clones immediately after government contact)

THE IMMEDIATE THREAT

The defendants' actions have created ongoing vulnerabilities. Foreign actors now actively target my systems. My security clearance eligibility is permanently compromised. The therapeutic resource I created to help others has become a honeypot for international surveillance. These are not speculative future damages - they are present realities caused by defendants' conduct.

CONCLUSION

I survived what they designed to destroy me. I documented what they thought they could hide. I paid for what they used against me.

This amendment reflects not vengeance, but arithmetic. They could have stopped this with a single email. Instead, they used my tax dollars to hack my book about healing. Normal governments don't do that. Normal governments don't make their own taxpayers into international intelligence targets. The damages must reflect that abnormality.

I remain willing to discuss resolutions. My contact information hasn't changed. Neither has their silence.

They took my money. They tried to take my freedom. They destroyed my careers. They made me a target. The \$3.2B is simply the bill for using a citizen's own resources to destroy him. I only have \$141.37 to my name at the time of writing while they spend unlimited resources to destroy me further. When are they going to realize that I don't have anything to lose and nothing to hide?

Respectfully submitted,

Marvin Tutt
